

Automated Email & Document Delivery System

SandeShika is a web application used to send bulk personalised emails using Gmail, Excel/CSV files, and optional PDF attachments.

1. System Requirements

Software Required

- Windows / macOS / Linux
- Google Chrome / Edge / Firefox
- Internet connection

Python & Libraries (For Setup / Deployment)

SandeShika requires the following Python packages:

Flask>=2.0

pandas>=2.0

openpyxl>=3.0

XlsxWriter>=3.1

requests>=2.31.0

gunicorn>=20.1.0

2. Gmail App Password (Required)

SandeShika uses Gmail App Password, not your Gmail login password.

How to Create Gmail App Password

1. Open:
<https://myaccount.google.com/apppasswords>
2. Enable 2-Step Verification (if not enabled)
3. Select:
App: Mail
Device: Other (SandeShika)
4. Click Generate
5. Copy the 16-digit password

This password is required to use SandeShika.

3. SMTP Email & App Password Section

SMTP Email

Enter your Gmail email address

Example:

officialemail@example.com

Gmail App Password

Enter the 16-digit App Password generated from Google.

Normal Gmail password will not work.

Sender Name

Enter the name that recipients will see.

Example:

Lighthouse Communities Foundation

4. Step 1 — Upload Employees File

Upload an Excel (.xlsx) or CSV (.csv) file.

Mandatory Column

email

Optional Columns

name

emp_name

employee_name

Used for email personalisation and PDF matching.

5. Step 2 — Upload PDFs (Optional)

Upload one or more PDF files.

PDF Matching

PDF filenames are matched with employee names.

Skip if no matching PDF found

- Enabled: email is skipped
- Disabled: email is sent without PDF

6. Step 3 — Email Content

Subject

Enter the email subject.

Example:

NDA Agreement – Action Required

Email Body

Write your email message.

Supported placeholders:

- {name} – First name
- {full_name} – Full name

Example:

Hi {name},

Please review and sign the attached document.

****Deadline: 20th December****

Bold Text

Use Ctrl + B (Windows) or Cmd + B (Mac).

7. Email Signature (Optional)

Paste a plain text or HTML signature.

Links and icons are supported. Unsafe scripts are removed automatically.

If left empty, SandeShika uses:

Regards,

Sender Name

Signature Options

- Use saved default signature
- Save this signature as default

8. Step 4 — CC / BCC (Optional)

CC

cc1@example.com, cc2@example.com

BCC

bcc@example.com

9. Preview Emails

Use Preview to check emails before sending.

You can preview 1–10 emails and verify content, signature, and attachments.

10. Send Emails

Click Send Emails.

1. Preview screen opens
2. Verify email content
3. Click Send All

Use Send Single Email to test with one recipient.

11. After Sending Emails

A summary is displayed showing:

- Total emails
- Sent emails
- Errors
- Time taken

You can download the email delivery report in Excel format.

12. Common Errors and Solutions

SMTP Login Failed

Check Gmail App Password and ensure 2-Step Verification is enabled.

Invalid Email Address

Correct the email format in the Excel file.

Network Error

Check internet connection or server firewall.

13. Security and Safety

- Gmail login password is never stored
- App Password is used securely
- HTML signatures are sanitized
- Data is processed securely

14. Best Practices

- Always preview emails before sending
- Test using Send Single Email
- Keep PDF filenames clear and simple
- Use {name} placeholder for personalisation
- Save signature for reuse
